

**SUBJECT: Instrument Relocation to Improve Safe Access**

Dear PM Flow Facility Users,

We have recently relocated some of our analytical instruments in order to allow all instruments to be accessible at any time while maintaining appropriate physical distancing. Please, see chart below for new locations of analytical instruments. Some equipment has been moved to the PM610 10<sup>th</sup> floor, room 10-609. Access to this room will be available during shift periods but will be locked outside of the shift. Consult PM Flow staff to arrange appropriate off shift use (such activity requires prior approval from executive).

Analytical Flow Cytometer:	New Location:
<b>Cytoflex 1</b>	Room 8-516 (old office)
<b>Fortessa 2</b>	Room 8-605 (Bay 2)
<b>Fortessa X20</b>	Room 10-609
<b>Canto II</b>	Room 10-609

Once the new space is approved by safety on the morning of June 5, restrictions on instrument bookings will be removed. We will however, continue to monitor bookings as well as limit advanced bookings to 4 weeks to ensure that everyone has fair access for their experimental needs.

If you have any concerns, please, contact [PMFlow@uhnresearch.ca](mailto:PMFlow@uhnresearch.ca)

Thank you for your patience and cooperation.

Sincerely,

Arda Shahinian  
Manager,  
PMFlow Cytometry Facility  
At Princess Margaret Cancer Centre  
610 University Ave., 8<sup>th</sup> floor
